introducing the project

feminist communities for climate justice

The climate crisis is an everything crisis.

Climate justice means that while reducing carbon emissions we are also reducing social inequalities, creating a fairer and more just world in the process.

Climate justice recognises that the effects of climate breakdown are not felt equally.

‘those that cause the least of the climate crisis are the most affected, with the least resources to respond’

feminist communities for climate justice

Feminist Communities for Climate Justice will

Amplify the voices of women and marginalised communities most impacted by climate crisis

Advocate: with women and marginalised communities; influence policy

Mobilise: *Communities for Climate Justice National Network*, supporting and learning from one another

Train: Certificate Programme with NUI Maynooth; toolkits

why now?

all policy is climate policy

Ireland's legally binding emissions targets:

- 50% reduction by 2030
- Net-zero emissions by 2050

All future policy decisions will be impacted by these targets. Our housing, energy, transport, agriculture and more will all be affected by the climate crisis.

There is no policy area or crisis that we are currently experiencing that does not have a link to climate breakdown. **All policy is climate policy.** And **all policy needs to be gender, poverty and equality proofed.**

Women are more likely to be hardest hit by the impacts of climate emergency, in Ireland and globally:

They are socioeconomically disadvantaged compared to men

Care work is key to how women experience and are impacted by the climate crisis.

Their voices must be central; their input is essential in ensuring that future climate action does not worsen existing gender inequality

pillars

just transition: nobody left behind

Rural communities – consultation and support, not blame

The scaling down, or transformation of industries like peat production and agriculture must be done in conversation with the communities who rely on them for their livelihoods.

Accessibility must be part of the planning process, not an afterthought, for disabled people to be able to fully participate.

A truly just transition means that **nobody is left behind** in our net-zero future – justice must be mandatory to the transition!

energy and housing

The unstable nature of fossil fuel energy costs impacts on rising energy bills – secure green energy, not choosing between heating and eating.

Ties into our housing crisis – energy inefficient Irish homes are more expensive to run.

Traveller community spends five to six times the national average to keep trailers warm; private renters have no say in whether retrofitting occurs for the property they call home.

The upfront cost of retrofitting, even with government subsidies, remains out of reach for the majority of the population.

Women are at greater risk of energy poverty

care

Care work: essential and low-carbon, but undervalued, underpaid or taken for granted – and largely carried out by women.

Caring jobs like teaching, community work and healthcare are **26 times greener than manufacturing jobs** but are seldom part of the green jobs discourse.

Education often touted as crucial for our green transition, yet our teachers are being priced out of their homes and jobs.

Care work should be recognised as the essential green work that it is. Better pay, better hours and better working conditions to allow for women to fully participate in economic, political and social life.

transport

Climate Action Plan 2023 goal – half of all journeys to be active travel journeys by 2030. But 69% of all trips in Ireland are still taken by car.

Rural areas in particular lacking alternative transport infrastructure, locked into car dependency.

Air pollution from traffic congestion is bad for our respiratory health; children are particularly vulnerable.

Upfront cost of electric vehicles is still out of reach for many, and adequate charging infrastructure will be needed to make them viable.

Transport is not a gender-neutral issue – women's transport needs are different to men's.

biodiversity, food & agriculture

Citizens Assembly: the State has comprehensively failed in implementing laws to protect our native flora and fauna.

Once a species is extinct, we can never get it back.

Bee and bird species endangerment has serious implications for production of food by our farmers – resistance to pests and changing weather relies on biodiversity.

Farmers are the custodians of our land with rich knowledge and understanding of it – they must be supported and encouraged to conserve and restore biodiversity.

join us!

The communities of Ireland themselves should have the knowledge, tools and capacity for the green transition.

Community workers have always been at the forefront of identifying issues that risk disrupting or unfairly impacting the areas they work in.

Our project is aimed at helping the people who will be most impacted.

Nobody knows a community better than the people who call it home!

Our climate policy needs to be gender, poverty and equality proofed – we cannot risk creating sustainable futures where inequality and discrimination are also sustained!

We don't want 'green' sexism.

We don't want 'zero emissions' poverty or homelessness.

A net-zero future for some should not come at the expense of others.

We want everyone to enjoy our green future on equal footing.

We have a chance to create a world which is fairer to our environment and marginalised groups in our society, and we need to take it!

roundtable session

1. What would climate justice mean for you and your life?
2. What skills, knowledge and/or experience do you have to help achieve climate justice? This could be in your community, county or country!
3. Name some opportunities and/or challenges in achieving climate justice. Who should be responsible for addressing what you have listed?

looking
ahead:
what's next?

Global Climate Strike tomorrow Friday 15th September – join us!

Project Introductory Webinar on Tuesday 26th September 1-2pm

Sign up to the project mailing list!

thank you!
